

Yejin:

Original Website link : <https://www.fixnothing.com/us/main/index.php>

My website link :

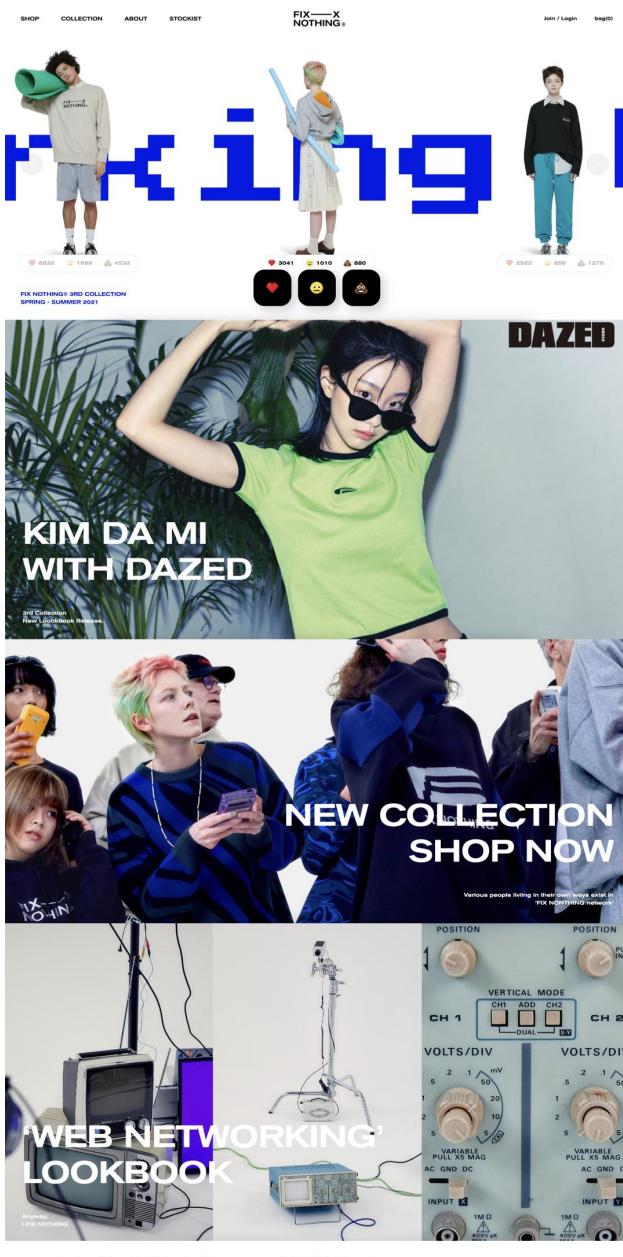

https://yejinkime.github.io/SP21-PUFY1225-DIGITAL-CRAFT/homework/hw1_fixnothing_v2.html

Html code github link :

https://github.com/yejinkime/SP21-PUFY1225-DIGITAL-CRAFT/blob/main/homework/hw1_fixnothing_v2.html

CSS code github link:

<https://github.com/yejinkime/SP21-PUFY1225-DIGITAL-CRAFT/blob/main/css/fixnth.css>

From the first page, I can notice stylistically that:

1. On the top of the page, logo, left and right menu are in the same line.
2. There is a moving image (maybe gif) on the first part of the body.
3. There are emoji buttons in the center. It is a rounded rectangle and black.
4. There are three different photos that each link to different pages.
5. There are big, bold texts on the photo.
6. Wide and bold font was used.
7. Footer navigation bar and description are showing with light font.

Html and CSS breakdown

1. Logo and top navigation

html :

```
<!DOCTYPE html>
<!-- The website this is a structural break down can be found at: www.fixnothing.com
-->
<html>
  <head>
    <meta charset="UTF-8">
    <title>FIX NOTHING</title>
    <link rel="stylesheet" type="text/css" href="../css/fixnth.css">
  </head>

  <body>
    <div id="center" class="logo">
      
    </div>

    <div id="left" class="topnav">
      <a href="#shop">SHOP</a>
      <a href="#collection">COLLECTION</a>
      <a href="#about">ABOUT</a>
      <a href="#stocklist">STOCKLIST</a>
    </div>

    <div id="right" class="topnav">
      <a href="#Bag">bag</a>
      <a href="#join/login">Join/Login</a>
    </div>
  </body>
</html>
```

- <head><link> Link css file to make stylesheet for the website
- <div id="center" class="logo"> Put the logo image and adjust the width to look similar to the original website.
- <div id="left" class="topnav"> & <div id="right" class="topnav"> Create a linked list to make a row of navigation bars.

CSS:

```
@import url('https://fonts.googleapis.com/css2?family=Noto+Sans+KR:wght@300&family=Syncopate:wght@700&display=swap');

#center
{
    float: none;
    position: absolute;
    top: 7%;
    left: 50%;
    transform: translate(-50%, -50%);
}

#left a
{
    float: left;
    color: #000000;
    font-family: 'Syncopate', sans-serif;
    text-align: center;
    top: 7%;
    padding: 20px 20px;
    text-decoration: none;
    font-size: 12px;
}

#right a
{
    float: right;
    color: #000000;
    font-family: 'Syncopate', sans-serif;
    text-align: center;
    top: 7%;
    padding: 20px 20px;
    text-decoration: none;
    font-size: 12px;
}
```

- #center

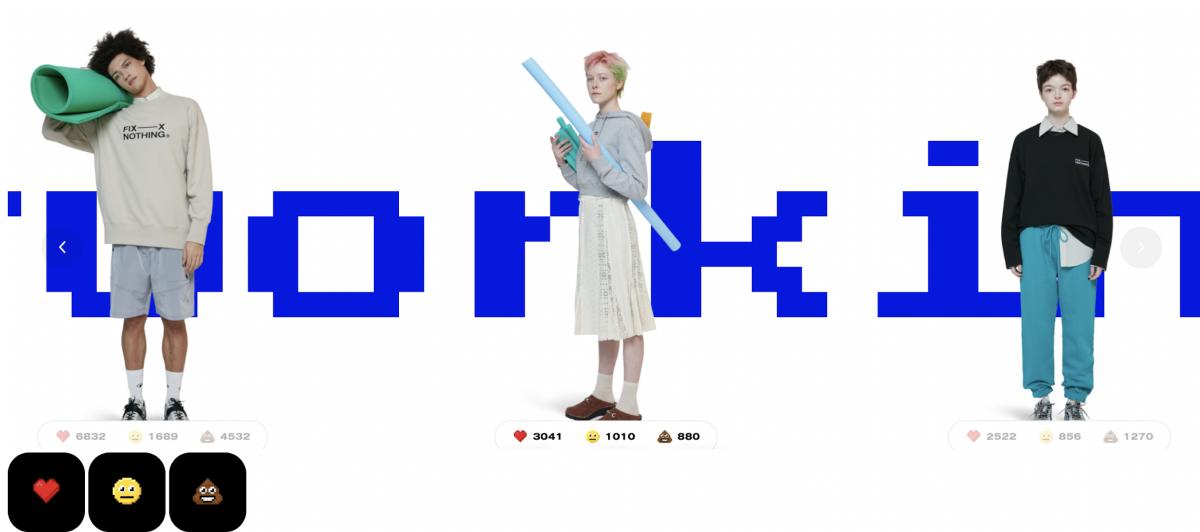

To make the logo locate at the same line with navigation bar, I designated the position by set the top as 7%, left 50%, position: absolute, float: none and transform: translate(-50%, -50%)

- #left a & #right a

To make each navigation bar showing on the end of each side, I wrote float:left (right). Also, I designated the same percent on top (top:7%) to make all the components on the top located in the same line.

I found a font called Syncopate that looks similar to the original one. It looked the most similar in size to 12px, and the color was set to black.

2. First part of body – interactive zone

(my website)

html :

```

<div id="photo" class="firstbody">
|   
</div>

<div id="icons" class="button">
    <button></button>
    <button></button>
    <button></button>
</div>

```

- <div id="photo" class="firstbody"> Since we have not yet learned to organize web pages interactively, I used captured image.
- <div id="icons" class="button"> I put the image in the button and set the size as 40px.

CSS:

```
#icons button
{
    background-color: #000000;
    border: none;
    padding: 25px 25px;
    border-radius: 25px;
}
```

- #icons

To make the button look similar to the original one, I changed the background color as black with no border, 25px of radius, and 25px 25px of padding.

3. Second part of body – photos

html:

```
<div id="photo" class="secondbody">
    
    
    
</div>
```

- <div id="photo" class="secondbody">

In this part, I downloaded the image source from the original website. It's a little bigger than the size of the webpage, so I changed the width to 100% to fit the screen.

4. Footer

    </p>
  </ul>
</footer>
</body>
</html>
```

CSS:

```
footer
{
  font-family: 'Noto Sans KR', sans-serif;
  font-size: 12px;
}
```

- I imported the font called Noto Sans from google fonts that I think best resembles from the website.
